

Description

Butterfly Valves adopt Triple eccentric design with metal seat and resilient seat.

1st offset: center line of the resilient disc seal is offset from the center line of the shafts

2nd offset: the center line of the shaft is offset from the valve body

3rd offset: the body seat landing surface has the shape of an oblique cone with the ground surface perpendicular to one side of the cone.

Suitable for manual, gear, electric, hydraulic and pneumatic actuation

Widely used in Petrochemical, Power Plant, and Construction industries
